

## Population Forecast for India (Next 10 Years)

| Year   | Predicted Population (Billions) |
|--------|---------------------------------|
| 2025.0 | 1.48                            |
| 2026.0 | 1.5                             |
| 2027.0 | 1.52                            |
| 2028.0 | 1.53                            |
| 2029.0 | 1.55                            |
| 2030.0 | 1.57                            |
| 2031.0 | 1.58                            |
| 2032.0 | 1.6                             |
| 2033.0 | 1.62                            |
| 2034.0 | 1.63                            |

## Population Forecast for India

### Limitations of Prediction Model:

1. Linear regression assumes constant growth, which may not reflect real-world changes.
2. It does not consider external factors like migration, government policies, or economic conditions.
3. Predictions become less accurate for long-term forecasting.
4. Unexpected events (pandemics, conflicts) can significantly impact population trends.
